Physician - Follow up Visit encounter performed at Housing Unit.

SUBJECTIVE:

COMPLAINT 1 Provider: Bialor, Bruce (MAT) MD, CD

Chief Complaint: GENERAL

Subjective: I was informed this morning of low BP's by medical assistant.

Saw pt briefly outside housing unit.

Does report LHeadedness.

Was started last week on Elavil and Lexapro by Psychiatrist.

Elavil does help him sleep, but I expressed concern about him being on this medication with his known CAD and LV dysfunction. As a result, will D/C Elavil and start low-dose Remeron.

Pt was agreeable to this change.

Psychiatry - Admission Note encounter performed at Health Services.

SUBJECTIVE:

COMPLAINT 1 Provider: Bryskin, Lawrence MD

Chief Complaint: MENTAL HEALTH

Subjective: 61 yo aa/d/m father of 2 adult off springs. In mdc 2 months. patient complaining of anxiety, fearful anticipating possible serious, even life threatening medical pathology. This include femoral artery blockage & 3 compromised "blocked" coronary arteries + inguinal & umbilical hernias. Lawyer over 30 years, patient feels ex partners have turned on patient setting him up over charge of threatening behavior on eve of possible legal proceeding over charge of cyber stalking" patient also reports being near another prisoner who was stabbed in face last week. patient most disturbed by this including "blood on floor" next to his cell. Relating in a rational composed manner patient reports that emotionally he is in a turmoil over this, ultimately fearing for his life as he obsesses over his dangerous medical state. Belatedly mentioned age mother 82 who is frail, sickly requiring his care. Additional matter on mind. masks emotionality as relates in casual "easygoing" manner. patient agreeable to lexapro 5-10mg/d for anxiety associated with brooding ruminating, obsessing about his condition and amitriptyline 25mg at bedtime. needs attention starting with psychology. follow up as needed.

Chronic Care - Chronic Care Clinic encounter performed at Housing Unit.

SUBJECTIVE:

COMPLAINT 1 Provider: Bialor, Bruce (MAT) MD, CD

Chief Complaint: GENERAL

Subjective: 60-yo pre-trial male. Pt was seen in conjunction with NP, for CCC.

Admitted 10/18-->11/8 to TBHC, then 11/8-->11/21 to Bellevue. Recently Dx'd 3-vessel CAD with LV dysfunction, and PAD of LE's, R > L. Has totally occluded R femoral artery with aneurysm, also with HTN and Hyperlipidemia. Lab work in last 3 weeks revealed Hb A1C 6.5, in the diabetic range, as well as hypercalcemia due to primary hyperparathyroidism. No Family Hx of DM. No hx of kidney stones. Denies constipation.

His main concern is the hernia (RIH). Sits all day because of it, stating size and pain level are both increasing. Estimates that can't walk more than 1/2 block because of R leg pain. Remains CP-free. Taking all meds as prescribed.

He understands that operative risk to get RIH repaired is increased because of coexisting CAD not being revascularized or operated on. He states the Cardiology team at Bellevue had "cleared" him for hernia repair. At this point, hernia repair remains his highest priority.

Pain: Not Applicable

Seen for clinic(s): Cardiac, Diabetes, Endocrine/Lipid, General, Hypertension

Disposition:

Follow-up at Sick Call as Needed
 Follow-up at Chronic Care Clinic as Needed
 Return Immediately if Condition Worsens

Other:

Pt reported that Cardiologists at Bellevue cleared him for RIH repair. Spoke with TBHC Surgeon Dr. Milone, who knows pt from initial admission, after this visit. If Bellevue Cardiology cleared him, he asked me to provide that documentation to him; if so, we could arrange elective admit to TBHC for RIH repair after the New Year. However, on reviewing Bellevue records after the visit, there's no documentation that Cardiology cleared him for RIH repair. As a result, hold off with such plans. Asked NP to make sure pt has hernia belt or truss.
 Start checking BS's. Already on Jardiance for CAD.

INFORMED CONSENT FOR TREATMENT WITH PSYCHIATRIC MEDICATION

U.S. DEPARTMENT OF JUSTICE

FEDERAL BUREAU OF PRISONS

I, WILLIE DENNIS, Reg. # 91401-054

hereby authorize my provider, Bialor, Bruce (MAT) MD, CD at institution: BRO-BROOKLYN MDC
or his/her relief (designee), to prescribe me the mental health medication listed below and to continue taking said medication as is recommended for the treatment of my mental health.

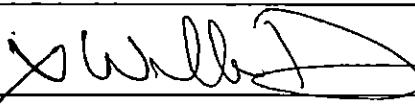

1. I understand that this medication is useful because it has been found to be effective in treating one or more psychiatric conditions. I understand that this medication may improve my condition by relieving all or some of the symptoms associated with the mental health condition being treated.
2. My provider counseled me about the benefits and the risks of potential side effects associated with this medication. I was given an opportunity to ask questions and have my concerns addressed. I understand that more information on specific side effects will be provided to me in writing with the medication from the pharmacy. I will read this information and follow up with my pharmacist and/or provider should I have additional questions or concerns.
3. I understand that not taking this medication as prescribed may lead to a worsening of symptoms. I have been made aware that some symptoms of psychiatric conditions may get better or even go away without taking medication. I understand that I may stop taking this medication at any time by contacting my provider. I was made aware that abrupt discontinuation might cause withdrawal effects, affecting my health. Additionally, I am aware that I should contact my provider before starting any new medications due to potential interactions with prescription medications, OTC medications, herbal products, and/or dietary items.
4. I understand that other treatment options may include other medication with similar benefits that may cause some of the same side effects I may experience with this medication and that other non-drug treatments may involve counseling by a psychologist or other medical professional.

Medication Consenting to:

Remeron (Mirtazapine)

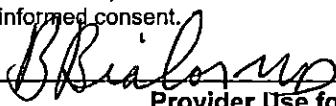

Other Issues Discussed: Anxiety and Depression

I have read and understand the foregoing, or it was explained in a language I understand, and I voluntarily consent to take the medication as prescribed.

INFORMED CONSENT FOR TREATMENT WITH PSYCHIATRIC MEDICATION

U.S. DEPARTMENT OF JUSTICE

FEDERAL BUREAU OF PRISONS

I, WILLIE DENNIS, Reg. # 91401-054
 hereby authorize my provider, Bryskin, Lawrence MD at institution: BRO-BROOKLYN MDC
 or his/her relief (designee), to prescribe me the mental health medication listed below and to continue taking said medication as is recommended for the treatment of my mental health.

1. I understand that this medication is useful because it has been found to be effective in treating one or more psychiatric conditions. I understand that this medication may improve my condition by relieving all or some of the symptoms associated with the mental health condition being treated.

2. My provider counseled me about the benefits and the risks of potential side effects associated with this medication. I was given an opportunity to ask questions and have my concerns addressed. I understand that more information on specific side effects will be provided to me in writing with the medication from the pharmacy. I will read this information and follow up with my pharmacist and/or provider should I have additional questions or concerns.

If any side effects occur, I will notify medical staff at sick call as soon as possible. If I experience a side effect that causes severe discomfort or is life threatening, I will notify the institutional staff immediately.

3. I understand that not taking this medication as prescribed may lead to a worsening of symptoms. I have been made aware that some symptoms of psychiatric conditions may get better or even go away without taking medication. I understand that I may stop taking this medication at any time by contacting my provider. I was made aware that abrupt discontinuation might cause withdrawal effects, affecting my health. Additionally, I am aware that I should contact my provider before starting any new medications due to potential interactions with prescription medications, OTC medications, herbal products, and/or dietary items.

4. I understand that other treatment options may include other medication with similar benefits that may cause some of the same side effects I may experience with this medication and that other non-drug treatments may involve counseling by a psychologist or other medical professional.

Medication Consenting to:

To Whom It May Concern,

I am the attending physician for Willie Dennis who is currently in federal custody and currently an inpatient at Bellevue Hospital Center. Mr. Dennis has three important medical conditions under treatment and he requested that I write this letter to clarify his medical situation.

1. Severe coronary artery disease. One of his three coronary vessels is 100% occluded and the other two are each 80% occluded, which puts him at risk for a heart attack (myocardial infarction). Because he is not experiencing current symptoms from these conditions, our cardiologists have concluded that he can be medically managed without a surgical procedure, but this recommendation would change if he were to develop cardiac symptoms, such as chest pain.
2. Severe peripheral vascular disease. The right femoral artery, which is the main artery to the right leg, is completely occluded. This is not an emergent condition but the artery will need to be opened up with a vascular procedure that will likely be scheduled in the future to preserve function in his leg and foot. Because of the cardiac risk of doing a vascular procedure to open up this vessel, Mr. Dennis has elected to hold off on this procedure. In the meantime, his ability to walk is markedly limited to about 50 feet on level ground by leg pain.
3. A large inguinal hernia and an umbilical hernia. The inguinal hernia, which continues to grow in size and cause Mr. Dennis significant pain, will require likely elective surgery that may also be scheduled in the future. Again, because of his cardiac disease, there is a 10-15% risk of a major complication of doing any surgery, so Mr. Dennis has elected to wait for this. In the meantime, he is wearing a hernia belt to limit his discomfort. He should have a truss for comfort at all times.

Mr. Dennis will not need to stay in the hospital while waiting for these procedures but he will need access to the medications we prescribe while in federal custody. These include ASA 81 mg daily, Jardiance 25 mg daily, Spironolactone 25 mg daily, Entresto 24-26 mg daily, Metoprolol XL 50 mg daily, and Atorvastatin 80 mg daily. Furthermore, he has requested an opportunity to access his health insurance, which is currently not available due to his legal status. If any of his officers would like further clarification, they can contact my office at 212 562-4743.

Sincerely,

Nate Link

Dr. Miller, Resident, NYU-Bellevue Hospital: Ready for discharge, but tested (+)ve for COVID on 11/18. Having productive cough and diarrhea, but not requiring O2. They were planning to start Paxlovid today, so I'll include this in D/C med list. Lipitor to be held while on Paxlovid.

I have reviewed this patient's available medical file for recent labs, tests, and encounters and found this treatment to be clinically indicated at this time.

Admin Note - Community Hospital Report encounter performed at Health Services.

Administrative Notes:

ADMINISTRATIVE NOTE 1 Provider: Bialor, Bruce (MAT) MD, CD

Hospitalist Attending Dr. Link, NYU-Bellevue: Because asymptomatic from a cardiac standpoint, and has good collateral flow, Cardiology is recommending medical mgmt.; in addition, pt is refusing both CABG and PCI.

Similarly, because not having rest pain, Vascular Surgery is recommending no urgent intervention at this time for R femoral artery occlusion and aneurysm.

Can be discharged on Jardiance 25 QD, Entresto 24/26 BID, Toprol XL 50 QD, ASA 81 QD, Lipitor 80 QD, and Aldactone 25 QD.

Pt is most interested in having RIH repaired, and they were going to give him an outpt appt in their General Surgery Clinic, but I told him we'd have him F/U at TBHC Surgery Clinic. Will also need outpt F/U with Cardiology and Vascular Surgery.

Can be discharged today, but custody staff not available, so won't get picked up till 11/21, after the weekend.

Note Date:	10/24/2022 13:48	Provider:	Bialor, Bruce (MAT) MD,	Facility:	BRO
				Unit:	G01

Admin Note - Community Hospital Report encounter performed at Health Services.

Administrative Notes:

ADMINISTRATIVE NOTE 1 Provider: Bialor, Bruce (MAT) MD, CD

Dr. Vachani, Medical Resident, Brooklyn Hospital, on behalf of Attending Dr. Reddy: Initially admitted to Surgical service for RIH and R femoral artery occlusion, with aneurysm. Had pre-op cardiac W/U revealing LVEF 20-25%. Cardiac cath is recommended, but pt is refusing. Spoke with pt by speaker phone.

His concerns are due to the fact that he's his own defense attorney, so he wants to have access to legal materials and medical records, both of which are on electronic devices. He's looking for the court to intercede; waiting to hear back, after speaking to personal attorney this morning.

He does understand the seriousness of the above medical issues.

As for speaking with family members, I told him this is usually not allowed while he's admitted for acute medical issues.

Copay Required: No

Cosign Required: No

Telephone/Verbal Order: No

 Provider: Bialor, Bruce (MAT) MD,

Reg #: 91401-054
 Facility: BRO
 Unit: G01

Cosign Note - Intake Cosign encounter performed at Housing Unit.

SUBJECTIVE:

COMPLAINT 1 Provider: Bialor, Bruce (MAT) MD, CD

Chief Complaint: GENERAL

Subjective: Pt was seen and examined in his cell, with RN and Unit Officer present.

60-yo male, with >40-pack-year smoking hx, plus HTN and hyperlipidemia, with over 6-month hx of intermittent pain from proximal R thigh to distal calf, brought on by ambulation, resolving with rest. Over the last week, pain increasing in severity, occurring with shorter distances, though denies having rest pain. Also has RIH.

Was taken to NY Presbyterian Lower Manhattan Hospital yesterday, after being remanded; was Dx'd with occlusion of R femoral artery, and femoral artery aneurysm, but was deemed "fit for confinement" was advised to see a Vascular Surgeon in 1 week.

On exam:

General: NAD. Calves with decreased muscle bulk.

Skin: No hair growth below knees.

Extremities: No edema. RLE cooler than LLE, from distal calf down.

Peripheral Vascular: No DP or PT pulses in RLE; 1+ in LLE.

Pain:

Not Applicable

Referral - STAFF

Inmate Name:	DENNIS, WILLIE			Reg #:	91401-054
Date of Birth:	████████/1962	Sex:	M	Facility:	BRO
Date:	11/28/2022 13:00	Provider:	Barrett, N. DTS		

Comments

DENNIS is an A-PRE detainee at BRO who reported a substance use history significant for cigarette use during a psychology intake (see associated 11-22-2022 Intake Screening). A referral for the Non-residential Drug Abuse Program (NR DAP) was made by the interviewer.

DENNIS is currently in isolation status on G-41. He may be considered for programming when he returns to general population and the program is in open enrollment status on the unit he is assigned. Per referral, DENNIS will be added to the local NR DAP waitlist and contacted for assessment as noted above. Referral source was notified of the same.

Psychology Services

Intake Screening

Inmate Name:	DENNIS, WILLIE	Reg #:	91401-054
Date of Birth:	■■■■■/1962	Sex:	M
Date:	11/22/2022 13:56	Facility:	BRO
		Provider:	Rosinski, Amanda PhD

Limits of Confidentiality

Limits of confidentiality were reviewed with Mr. Dennis. He expressed an understanding of the limits of confidentiality and consented to be interviewed accordingly.

Data Source(s)

The following data sources were reviewed in conjunction with this Initial Intake Evaluation: Self-Report, SENTRY, PSIQ.

Mr. Dennis was seen by this writer for the completion of his PSIQ upon his return from the hospital. While completing the PSIQ, Mr. Dennis reported that he wished to speak to a mental health provider and wished to speak about drug treatment programming. As such, a psychology intake screening was immediately conducted. Mr. Dennis reported currently withdrawing from cigarette use. He also reported feeling depressed, anxious, and hopeless on his PSIQ.

Mental Health History and Current Symptoms

No history of mental health issues was noted.

No history of prior mental health treatment was noted.

Current mental health symptoms were noted: Depression, Anxiety.

Mr. Dennis reported feeling depressed, anxious, and hopeless on his PSIQ. When asked about these current symptoms, Mr. Dennis relayed that he is stressed out because he was recently hospitalized for a heart blockage and hernia. He indicated that he is currently taking medications to treat these medical issues. But he feels stressed out and stated that he could have a heart attack at any time. Mr. Dennis is also currently in a single, isolation cell due to being diagnosed with COVID-19. Finally, he is stressed out about his parents as well, as he was their primary caretaker in Florida prior to his current incarceration.

No suicidal ideation, attempts, or self-harm were noted.

Substance Use

A history of substance use was noted: Other.

Mr. Dennis reported a substance use history significant for cigarette use. He indicated that he last used cigarettes on 10/22/2022, and he is currently experiencing symptoms of withdrawal. He denied any other history of substance use. He expressed interest in NRDAP programming at this institution, and he will be referred for such programming by this writer.

No history of substance use treatment was noted.

Sex Offenses

No sexual offense convictions were noted.

No history of sexual predation in a correctional setting was noted.

Relevant Psychosocial History

Noteworthy psychosocial issues: Marital/Family History, Criminal History.

Mr. Dennis is a 60-year-old, black male. He was living in Orlando, Florida prior to his incarceration, and he reported that he was the primary caretaker for both of his parents in Florida. He indicated that his parents are aware that he is now incarcerated in NY, and he last spoke to them on 11/18/2022. Mr. Dennis currently identifies as single, and he has two children, ages 27 and 24.

Mr. Dennis reported that he did not have a job prior to his incarceration, as he was caring for his parents on a full-time basis.

Mr. Dennis indicated that he is currently charged with "threatening over emails." A review of SENTRY revealed that Mr. Dennis is currently charged with cyberstalking.

Adverse Childhood Experiences

Trauma Need: NO

	<u>No</u>	<u>Yes</u>	<u>Didn't Say</u>
Verbal Abuse	[x]		
Physical Abuse	[x]		
Sexual Abuse	[x]		
Emotional Abuse	[x]		
Neglect of Basic Needs	[x]

Physical Abuse of Maternal Figure	[x]		
Substance Abuse by Household Member	[x]		
Suicide Attempt/Mental Illness of Household Member	[x]		
Loss of Household Member to Prison	[x]		
Experience of adult trauma		[x]	

Adjustment to Incarceration

Adjustment to incarceration concerns were identified: Separation from Family, Other.

Mr. Dennis was recently hospitalized for medical concerns, including a heart blockage and a hernia. He reported feeling stressed out because of his medical issues, and he is also worried about his parents. He was reportedly their primary caretaker prior to his incarceration. Mr. Dennis is currently housed in a single, isolation cell due to being diagnosed with COVID-19. He reported normal eating and sleeping habits. Although he did not report any major concerns about his adjustment to this specific institution, Mr. Dennis reported feeling generally stressed out because of his current health and his parents' well-being. Mr. Dennis maintains a close relationship with his parents and is currently separated from them.

Current Mental Status: Mr. Dennis was alert and oriented. He was polite, calm, and cooperative in demeanor. He exhibited a neutral affect with appropriate range. Eye contact and hygiene were appropriate. He spoke with normal rate, tone, and volume. His thoughts were organized and coherent, with no loosening of associations or tangential, circumstantial, or irrelevant content. There was no evidence of perceptual disturbance, delusional ideation, or a formal thought disorder. He did not engage in any bizarre or inappropriate behavior. He noted having normal eating and sleeping habits. Mr. Dennis explicitly denied recent and current suicidal ideation, planning, and intent. He was future oriented and expressed a willingness to contact staff immediately should he experience suicidal ideation or psychological distress. He also denied thoughts of harming others.

Findings

Care Level: CARE1-MH

Mr. Dennis currently appears stable, and he did not exhibit any signs of major mood or thought disturbance. He reported feeling stressed out over his physical health and his parents' well-being. Mr. Dennis is currently being medically treated for his health concerns. He reported maintaining normal eating and sleeping habits. He denied any other major concerns about his incarceration. He has no recent significant mental health problems, his current presentation does not indicate current mental health problems, and he denied the need for psychological services at this time. Therefore, a CARE1-MH level seems most appropriate at this time. CARE1-MH is indicative of an inmate who shows no significant level of functional impairment associated with a mental illness and demonstrates no need for regular mental health intervention.

Recommendations

The following psychological services are recommended: Drug Treatment Program, Follow-Up Appointment, Other.

Based on his reported interest, this writer referred Mr. Dennis for NRDAP programming.

Mr. Dennis was educated about both routine and emergency procedures for contacting Psychology Services should he require assistance in the future. Due to his recent stressors regarding his physical health and his parents' well-being, Mr. Dennis will be seen in approximately one month for a follow-up appointment. He expressed willingness to self-refer to psychology staff if needed. He was encouraged to reach out for PRN services should he experience any psychological distress.

Willie Dennis MRN: [REDACTED]

Claudication in peripheral vascular disease (HCC) 11/8/2022 - 11/21/2022 Bellevue IP 17N TELE/MEDECINE

Instructions

Your medications have changed

- START taking:
aspirin (BAYER)
- atorvastatin (LIPITOR)
- empagliflozin (JARDIANCE)
- melatonin
- metoprolol succinate er (TOPROL)
- nirmatrelvir & ritonavir (PAXLOVID 300/100)
- sacubitril-valsartan (ENTRESTO)
- spironolactone (ALDACTONE)

Review your updated medication list below.

Why you were hospitalized

Your primary diagnosis was: Claudication in Peripheral Vascular Disease (Hcc)

Your diagnoses also included: Coronary Artery Disease, Non-Recurrent Unilateral Inguinal Hernia Without Obstruction Or Gangrene

Current Visit Procedures

Past Procedures (11/8/2022 to Today)

Date	Procedures	Providers
11/15/2022	ANGIOGRAM LOWER EXTREMITY	Joanelle Lugo, MD

Unscheduled Procedures

Date	Procedures	Providers
Not Scheduled	OPEN RIGHT INGUINAL HERNIA REPAIR WITH MESH	Robert Reader, MD

Ambulatory Referral to General Surgery

Reason for Referral: elective repair of inguinal hernia

Patient has verbally agreed to referral and acknowledged that this referral may result in an electronic consultation, televisit, or in person visit, and that coinsurance, copays, or other costs may apply, for which the patient will be responsible to pay:

Yes

Ambulatory Referral to Vascular Surgery

Reason for Referral: bilateral LE angiogram with intervention for right femoral artery occlusion

Patient has verbally agreed to referral and acknowledged that this referral may result in an electronic consultation, televisit, or in person visit, and that coinsurance, copays, or other costs may apply, for which the patient will be responsible to pay:

Yes

**Hospital Course****Medicine Course:**

Pt arrived to unit in stable condition. No complaints of chest pain, shortness of breath or pain in his RLE at rest. RLE with good pulses, warm to touch, without any numbness. Cardiology, CT surgery, and Vascular surgery consulted to evaluate urgency of his cardiac and vascular interventions. TTE performed showing depressed EF to 35-40%. OSH records reviewed by cardiology. Trop negative, never anginal symptoms. Thus, patient may be medically managed vs complex/targeted PCI. Case to be discussed at Heart Conference. Cardiology and CT surgery decided no need for stress testing. Will pursue medical management of asymptomatic triple vessel disease given recent trials REVIVE and ISCHEMIA. Vascular surgery recommending outpatient management for bilateral angiogram of lower extremities with possible endovascular intervention. General surgery recommending outpatient management of inguinal hernia repair. Pt deemed medically stable for discharge to DOC custody.

COVID-19 Message

For the latest information from NYC Health + Hospitals about COVID-19, including testing sites, vaccines, care & treatment, and more resources go to www.nychealthandhospitals.org

If you have a fever, cough, sore throat, or shortness of breath that is unrelated to an existing condition, or have questions about COVID-19 testing, please call 1-844-NYC-4NYC (1-844-692-4692).

The updated booster vaccine is now available! To make an appointment or for information about vaccines, please call 1-877-VAX-4NYC (1-877-829-4692)

Instructions

Dear Willie Dennis

It was a pleasure to be a part of your medical team during your admission to Bellevue Hospital. Please find below important instructions including changes to your medication regimen and contact information for scheduling appointments and imaging studies.

REASON FOR ADMISSION TO HOSPITAL: triple vessel disease

MAJOR EVENTS/TREATMENTS: Started on GDMT

IMPORTANT MEDICATION CHANGES

New medications: You should **BEGIN** taking the following medications at home.

Start taking Paxlovid twice daily for 5 days for your COVID infection

Start aspirin 81mg daily

Start jardiance 25mg daily for your heart

Start Atorvastatin 80mg for your cholesterol - only start taking this 2-3 days AFTER completing paxlovid

Start metoprolol 25mg twice daily for your heart

Start spironolactone 25mg daily for your heart

Start Entresto 24-26mg every 12 hours for your heart and blood pressure

Discontinued Medications: You should **STOP** taking the following medications.

You should **CONTINUE** taking all of your other home medications as you were prior to your hospitalization (please see complete list on the following pages for more details)

ADDITIONAL INSTRUCTIONS**When to Return to the Hospital:**

CHEST PAIN: If you experience chest tightness/pressure/pain or new and sudden onset shortness of breath, please report to the nearest Emergency Department.

Future Laboratory/Imaging Studies:

Angiogram of bilateral lower extremities with vascular surgery

Pending Laboratory Studies to Follow-Up with Your Doctor:

none

FOLLOW-UP APPOINTMENTS

- Please schedule follow-up with your Primary Care Doctor in 1-2 weeks.
- Please schedule follow up with vascular surgery outpatient for management of femoral artery occlusion and angiogram
- Please schedule follow up with general surgery outpatient clinic for management of inguinal hernia 12/22 at 9:00am

Bellevue

Contact Information:

To make new appointments or reschedule your appointments, please call 212-562-5555.

 Attached Information

CORONARY ARTERY DISEASE, RISK FACTORS (ENGLISH)

Coronary Artery Disease, Risk Factors

Research has shown that the risk of developing coronary artery disease (CAD) and having a heart attack increases with each factor you have.

RISK FACTORS YOU CANNOT CHANGE

- **Your age.** Your risk goes up as you get older. Most heart attacks happen to people over the age of 65.
- **Gender.** Men have a greater risk of heart attack than women, and they have attacks earlier in life. However, women are more likely to die from a heart attack.
- **Heredity.** Children of parents with heart disease are more likely to develop it themselves.
- **Race.** African Americans and other ethnic groups have a higher risk, possibly because of high blood pressure, a tendency toward obesity, and diabetes.
- **Your family.** Most people with a strong family history of heart disease have one or more other risk factors.

RISK FACTORS YOU CAN CHANGE

- **Exposure to tobacco smoke.** Even secondhand smoke greatly increases the risk for heart disease.
- **High blood cholesterol** may be lowered with changes in diet, activity, and medicines.
- **High blood pressure** makes the heart work harder. This causes the heart muscles to become thick and, eventually, weaker. It also increases your risk of stroke, heart attack, and kidney or heart failure.
- **Physical inactivity** is a risk factor for CAD. Regular physical activity helps prevent heart and blood vessel disease. Exercise helps control blood cholesterol, diabetes, obesity, and it may help lower blood pressure in some people.
- **Excess body fat**, especially belly fat, increases the risk of heart disease and stroke even if there are no other risk factors. Excess weight increases the heart's workload and raises blood pressure and blood cholesterol.
- **Diabetes** seriously increases your risk of developing CAD. If you have diabetes, you should work with your caregiver to manage it and control other risk factors.

OTHER RISK FACTORS FOR CAD

- How you respond to stress.
- Drinking too much alcohol may raise blood pressure, cause heart failure, and lead to stroke.
- Total cholesterol greater than 200 milligrams.
- HDL (good) cholesterol less than 40 milligrams. HDL helps keep cholesterol from building up in the walls of the arteries.

PREVENTING CAD

- Maintain a healthy weight.
- Exercise or do physical activity.
- Eat a heart-healthy diet low in fat and salt and high in fiber.
- Control your blood pressure to keep it below 120 over 80.
- Keep your cholesterol at a level that lowers your risk.
- Manage diabetes if you have it.
- Stop smoking.
- Learn how to manage stress.

HEART SMART SUBSTITUTIONS

- **Instead of** whole or 2% milk and cream, use skim milk.
- **Instead of** fried foods, eat baked, steamed, boiled, broiled, or microwaved foods.
- **Instead of** lard, butter, palm and coconut oils, cook with unsaturated vegetable oils, such as corn, olive, canola, safflower, sesame, soybean, sunflower, or peanut.
- **Instead of** fatty cuts of meat, eat lean cuts of meat or cut off the fatty parts.
- **Instead of** 1 whole egg in recipes, use 2 egg whites.
- **Instead of** sauces, butter, and salt, season vegetables with herbs and spices.
- **Instead of** regular hard and processed cheeses, eat low-fat, low-sodium cheeses.
- **Instead of** salted potato chips, choose low-fat, unsalted tortilla and potato chips and unsalted pretzels and popcorn.
- **Instead of** sour cream and mayonnaise, use plain low-fat yogurt, low-fat cottage cheese, or low-fat or "light" sour cream.

 Attached Information

Inguinal Hernia Adult Easy-to-Read (English)

Inguinal Hernia, Adult

An inguinal hernia is when fat or your intestines push through a weak spot in a muscle where your leg meets your lower belly (*groin*). This causes a bulge. This kind of hernia could also be:

- In your scrotum, if you are male.
- In folds of skin around your vagina, if you are female.

There are three types of inguinal hernias:

- Hernias that can be pushed back into the belly (are *reducible*). This type rarely causes pain.
- Hernias that cannot be pushed back into the belly (are *incarcerated*).
- Hernias that cannot be pushed back into the belly and lose their blood supply (are *strangulated*). This type needs emergency surgery.

What are the causes?

This condition is caused by having a weak spot in the muscles or tissues in your groin. This develops over time. The hernia may poke through the weak spot when you strain your lower belly muscles all of a sudden, such as when you:

- Lift a heavy object.
- Strain to poop (have a *bowel movement*). Trouble pooping (*constipation*) can lead to straining.
- Cough.

What increases the risk?

This condition is more likely to develop in:

- Males.
- Pregnant females.
- People who:
 - Are overweight.
 - Work in jobs that require long periods of standing or heavy lifting.
 - Have had an inguinal hernia before.
 - Smoke or have lung disease. These factors can lead to long-term (*chronic*) coughing.

What are the signs or symptoms?

Symptoms may depend on the size of the hernia. Often, a small hernia has no symptoms. Symptoms of a larger hernia may include:

- A bulge in the groin area. This is easier to see when standing. You might not be able to see it when you are lying down.
- Pain or burning in the groin. This may get worse when you lift, strain, or cough.
- A dull ache or a feeling of pressure in the groin.
- An abnormal bulge in the scrotum, in males.

Symptoms of a strangulated inguinal hernia may include:

- A bulge in your groin that is very painful and tender to the touch.
- A bulge that turns red or purple.
- Fever, feeling like you may vomit (*nausea*), and vomiting.
- Not being able to poop or to pass gas.

How is this treated?

Treatment depends on the size of your hernia and whether you have symptoms. If you do not have symptoms, your doctor may have you watch your hernia carefully and have you come in for follow-up visits. If your hernia is large or if you have symptoms, you may need surgery to repair the hernia.

Follow these instructions at home:

Lifestyle

- Avoid lifting heavy objects.
- Avoid standing for long amounts of time.
- **Do not** smoke or use any products that contain nicotine or tobacco. If you need help quitting, ask your doctor.
- Stay at a healthy weight.

Prevent trouble pooping

You may need to take these actions to prevent or treat trouble pooping:

- Drink enough fluid to keep your pee (*urine*) pale yellow.
- Take over-the-counter or prescription medicines.
- Eat foods that are high in fiber. These include beans, whole grains, and fresh fruits and vegetables.
- Limit foods that are high in fat and sugar. These include fried or sweet foods.

General instructions

- You may try to push your hernia back in place by very gently pressing on it when you are lying down. **Do not** try to push the bulge back in if it will not go in easily.
- Watch your hernia for any changes in shape, size, or color. Tell your doctor if you see any changes.
- Take over-the-counter and prescription medicines only as told by your doctor.
- Keep all follow-up visits.

Contact a doctor if:

- You have a fever or chills.
- You have new symptoms.
- Your symptoms get worse.

Get help right away if:

- You have pain in your groin that gets worse all of a sudden.
- You have a bulge in your groin that:
 - Gets bigger all of a sudden, and it does not get smaller after that.
 - Turns red or purple.
 - Is painful when you touch it.
- You are a male, and you have:
 - Sudden pain in your scrotum.
 - A sudden change in the size of your scrotum.
- You cannot push the hernia back in place by very gently pressing on it when you are lying down.
- You feel like you may vomit, and that feeling does not go away.
- You keep vomiting.
- You have a fast heartbeat.
- You cannot poop or pass gas.

These symptoms may be an emergency. Get help right away. Call your local emergency services (911 in the U.S.).

- **Do not wait to see if the symptoms will go away.**
- **Do not drive yourself to the hospital.**

Summary

- An inguinal hernia is when fat or your intestines push through a weak spot in a muscle where your leg meets your lower belly (*groin*). This causes a bulge.
- If you do not have symptoms, you may not need treatment. If you have symptoms or a large hernia, you may need surgery.
- Avoid lifting heavy objects. Also, avoid standing for long amounts of time.
- **Do not** try to push the bulge back in if it will not go in easily.

This information is not intended to replace advice given to you by your health care provider. Make sure you discuss any questions you have with your health care provider.

To Whom It May Concern,

I am the attending physician for Willie Dennis who is currently in federal custody and currently an inpatient at Bellevue Hospital Center. Mr. Dennis has three important medical conditions under treatment and he requested that I write this letter to clarify his medical situation.

1. Severe coronary artery disease. One of his three coronary vessels is 100% occluded and the other two are each 80% occluded, which puts him at risk for a heart attack (myocardial infarction). Because he is not experiencing current symptoms from these conditions, our cardiologists have concluded that he can be medically managed without a surgical procedure, but this recommendation would change if he were to develop cardiac symptoms, such as chest pain.
2. Severe peripheral vascular disease. The right femoral artery, which is the main artery to the right leg, is completely occluded. This is not an emergent condition but the artery will need to be opened up with a vascular procedure that will likely be scheduled in the future to preserve function in his leg and foot. Because of the cardiac risk of doing a vascular procedure to open up this vessel, Mr. Dennis has elected to hold off on this procedure. In the meantime, his ability to walk is markedly limited to about 50 feet on level ground by leg pain.
3. A large inguinal hernia and an umbilical hernia. The inguinal hernia, which continues to grow in size and cause Mr. Dennis significant pain, will require likely elective surgery that may also be scheduled in the future. Again, because of his cardiac disease, there is a 10-15% risk of a major complication of doing any surgery, so Mr. Dennis has elected to wait for this. In the meantime, he is wearing a hernia belt to limit his discomfort. He should have a truss for comfort at all times.

Mr. Dennis will not need to stay in the hospital while waiting for these procedures but he will need access to the medications we prescribe while in federal custody. These include ASA 81 mg daily, Jardiance 25 mg daily, Spironolactone 25 mg daily, Entresto 24-26 mg daily, Metoprolol XL 50 mg daily, and Atorvastatin 80 mg daily. Furthermore, he has requested an opportunity to access his health insurance, which is currently not available due to his legal status. If any of his officers would like further clarification, they can contact my office at 212 562-4743.

Sincerely,

Nate Link

Discharge Medications Safety Steps

IMPORTANT - Medication Safety Steps for You to Follow

Keep a list of all the medication you are taking including:

- Prescription medication ordered by your health care provider
- Over-the-counter medication (like Tylenol, Aspirin, Advil or Motrin, cold or cough medication, antacids, laxatives)
- Dietary supplements such as:
 - Vitamins (like vitamin C or E)
 - Minerals (like calcium or iron)
 - Herbal remedies (like ginko biloba)

It is important for you to have this medication list. It will help your health care provider in making decisions related to your health conditions. Bring your medications with you when possible.

Things you should do:

- Make a list of all medications you are taking - include the medication name and strength, amount you take, time to be taken and the reason you are taking this medication.
- Carry this medication list with you at all times in case of an emergency.
- Give this medication list to your health care provider at your next visit.
- Update this list each time when there is a change to your medication.
- If you have questions or need help updating your medication list, please ask your healthcare provider.

Smoking Cessation

Smoking is detrimental to your health. If you currently smoke or have smoked in the past 12 months, you are advised to stop. You are also advised to avoid exposure to second hand smoke. You may call the quit line at 1-888-609-6292 or 1-866-NYQUITS for help.

Your Medication List

You have not been prescribed any medications.

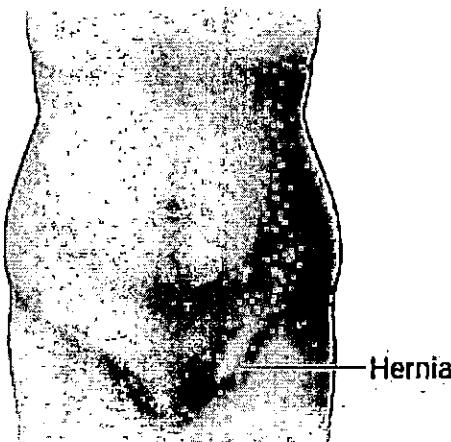

Connect Sign-Up

Send messages to your doctor, view your test results, renew your prescriptions, schedule appointments, and more.

Hernia: Care Instructions

Overview

© 2023 Healthwise, Incorporated.

A hernia develops when tissue bulges through a weak spot in the wall of your belly. The groin area and the navel are common areas for a hernia. A hernia can also develop near the area of a surgery you had before.

Pressure from lifting, straining, or coughing can tear the weak area, causing the hernia to bulge and be painful.

If you cannot push a hernia back into place, the tissue may become trapped outside the belly wall. If the hernia gets twisted and loses its blood supply, it will swell and die. This is called a strangulated hernia. It usually causes a lot of pain. It needs treatment right away.

Some hernias need to be repaired to prevent a strangulated hernia. If your hernia causes symptoms or is large, you may need surgery.

Follow-up care is a key part of your treatment and safety. Be sure to make and go to all appointments, and call your doctor if you are having problems. It's also a good idea to know your test results and keep a list of the medicines you take.

How can you care for yourself at home?

- Take care when lifting heavy objects.
- Stay at a healthy weight.
- Do not smoke. Smoking can cause coughing, which can cause your hernia to bulge. If you need help quitting, talk to your doctor about stop-smoking programs and medicines. These can increase your chances of quitting for good.
- Talk with your doctor before wearing a corset or truss for a hernia. These devices are not recommended for treating hernias and sometimes can do more harm than good. There may be certain situations when your doctor thinks a truss would work, but these are rare.

When should you call for help?

Call your doctor now or seek immediate medical care if:

- You have new or worse belly pain.

- You are vomiting.
- You cannot pass stools or gas.
- You cannot push the hernia back into place with gentle pressure when you are lying down.
- The area over the hernia turns red or becomes tender.

Watch closely for changes in your health, and be sure to contact your doctor if you have any problems.

Where can you learn more?

High Blood Pressure: Care Instructions

Overview

It's normal for blood pressure to go up and down throughout the day. But if it stays up, you have high blood pressure. Another name for high blood pressure is hypertension.

Despite what a lot of people think, high blood pressure usually doesn't cause headaches or make you feel dizzy or lightheaded. It usually has no symptoms. But it does increase your risk of stroke, heart attack, and other problems. You and your doctor will talk about your risks of these problems based on your blood pressure.

Your doctor will give you a goal for your blood pressure. Your goal will be based on your health and your age.

Lifestyle changes, such as eating healthy and being active, are always important to help lower blood pressure. You might also take medicine to reach your blood pressure goal.

Follow-up care is a key part of your treatment and safety. Be sure to make and go to all appointments, and call your doctor if you are having problems. It's also a good idea to know your test results and keep a list of the medicines you take.

How can you care for yourself at home?

Medical treatment

- If you stop taking your medicine, your blood pressure will go back up. You may take one or more types of medicine to lower your blood pressure. Be safe with medicines. Take your medicine exactly as prescribed. Call your doctor if you think you are having a problem with your medicine.
- Talk to your doctor before you start taking aspirin every day. Aspirin can help certain people lower their risk of a heart attack or stroke. But taking aspirin isn't right for everyone, because it can cause serious bleeding.
- See your doctor regularly. You may need to see the doctor more often at first or until your blood pressure comes down.
- If you are taking blood pressure medicine, talk to your doctor before you take decongestants or anti-inflammatory medicine, such as ibuprofen. Some of these medicines can raise blood pressure.
- Learn how to check your blood pressure at home.

Lifestyle changes

- Stay at a healthy weight. This is especially important if you put on weight around the waist. Losing even 10 pounds can help you lower your blood pressure.
- If your doctor recommends it, get more exercise. Walking is a good choice. Bit by bit, increase the amount you walk every day. Try for at least 30 minutes on most days of the week. You also may want to swim, bike, or do other activities.
- Avoid or limit alcohol. Talk to your doctor about whether you can drink any alcohol.
- Try to limit how much sodium you eat to less than 2,300 milligrams (mg) a day. Your doctor may ask you to try to eat less than 1,500 mg a day.
- Eat plenty of fruits (such as bananas and oranges), vegetables, legumes, whole grains, and low-fat dairy products.
- Lower the amount of saturated fat in your diet. Saturated fat is found in animal products such as milk, cheese, and meat. Limiting these foods may help you lose weight and also lower your risk for heart disease.
- Do not smoke. Smoking increases your risk for heart attack and stroke. If you need help quitting, talk to your doctor about stop-smoking programs and medicines. These can increase your chances of quitting for good.

When should you call for help?

Call 911 anytime you think you may need emergency care. This may mean having symptoms that suggest that your blood pressure is causing a serious heart or blood vessel problem. Your blood pressure may be over 180/120.

For example, call **911** if:

- You have symptoms of a heart attack. These may include:
 - Chest pain or pressure, or a strange feeling in the chest.
 - Sweating.
 - Shortness of breath.
 - Nausea or vomiting.
 - Pain, pressure, or a strange feeling in the back, neck, jaw, or upper belly or in one or both shoulders or arms.
 - Lightheadedness or sudden weakness.
 - A fast or irregular heartbeat.
- You have symptoms of a stroke. These may include:
 - Sudden numbness, tingling, weakness, or loss of movement in your face, arm, or leg, especially on only one side of your body.
 - Sudden vision changes.
 - Sudden trouble speaking.
 - Sudden confusion or trouble understanding simple statements.
 - Sudden problems with walking or balance.
 - A sudden, severe headache that is different from past headaches.
- You have severe back or belly pain.

Do not wait until your blood pressure comes down on its own. Get help right away.

Call your doctor now or seek immediate care if:

- Your blood pressure is much higher than normal (such as 180/120 or higher), but you don't have symptoms.
- You think high blood pressure is causing symptoms, such as:
 - Severe headache.

- Blurry vision.

Watch closely for changes in your health, and be sure to contact your doctor if:

- Your blood pressure measures higher than your doctor recommends at least 2 times. That means the top number is higher or the bottom number is higher, or both.
- You think you may be having side effects from your blood pressure medicine.

Bureau of Prisons
Health Services
Clinical Encounter - Administrative Note

Inmate Name:	DENNIS, WILLIE			Reg #:	91401-054	
Date of Birth:	[REDACTED] 1962	Sex:	M	Race:	BLACK	
Note Date:	11/22/2021 10:51	Provider:	Kang, Yoon PA-C			
		Facility:	BRO			
		Unit:	G01			

Admin Note - General Administrative Note encounter performed at Health Services.

Administrative Notes:

ADMINISTRATIVE NOTE 1 Provider: Kang, Yoon PA-C

Called IM's pharmacy, Duane Reade 212-207-8274, but no info found in the system according to the pharmacy staff. I called another pharmacy nearby as per the IM's request, Duane Reade (Walgreens) 212-759-9412, but still no info found at all.

IM states he had "heart attack" in 2018 for which he went to hospital and underwent cardiac cath where no stent or intervention required but medical tx was recommended at the time.

Reports taking 4 medication for his heart but he does not recall any of the names at this time. He states he needs to speak to his family to find out the names and will let us know.

Copay Required: No

Cosign Required: Yes

Telephone/Verbal Order: No

Completed by Kang, Yoon PA-C on 11/22/2021 11:00
